Degree: B.E - AI & ML

## 2024_28_III_OOPS Using Java Lab

## 2028_REC_OOPS using Java_Week 3_Q4

Attempt : 1
Total Mark : 10
Marks Obtained : 10

## Section 1 : Coding

1. Problem Statement

Sesha is developing a weather monitoring system for a region with multiple weather stations. Each weather station collects temperature data hourly and stores it in a 2D array.

Write a program that can add the temperature data from two different weather stations to create a combined temperature record for the region.

### *Input Format*

The first line of input consists of two space-separated integers N and M, representing the number of rows and columns of the matrices, respectively.

The next N lines consist of M space-separated integers, representing the values of the first matrix.

The following N lines consist of M space-separated integers, representing the values of the second matrix.

## Output Format

The output prints the addition of the two matrices in N rows and M columns, representing the combined temperature record.

Refer to the sample output for formatting specifications.

### Sample Test Case

Input: 3 3
1 2 3
4 5 6
7 8 9
1 1 1
2 2 2
3 3 3

Output: 2 3 4
6 7 8
10 11 12

### Answer

```java
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int N = sc.nextInt();
        int M = sc.nextInt();

        int[][] matrix1 = new int[N][M];
        int[][] matrix2 = new int[N][M];
        int[][] result = new int[N][M];

        // Read first matrix
        for (int i = 0; i < N; i++) {
            for (int j = 0; j < M; j++) {
                matrix1[i][j] = sc.nextInt();
```

```java
        }
    }

    // Read second matrix
    for (int i = 0; i < N; i++) {
        for (int j = 0; j < M; j++) {
            matrix2[i][j] = sc.nextInt();
        }
    }

    // Add matrices
    for (int i = 0; i < N; i++) {
        for (int j = 0; j < M; j++) {
            result[i][j] = matrix1[i][j] + matrix2[i][j];
        }
    }

    // Print result
    for (int i = 0; i < N; i++) {
        for (int j = 0; j < M; j++) {
            System.out.print(result[i][j] + " ");
        }
        System.out.println();
    }
    }
}
// You are using Java
```

*Status :* Correct                                                                 *Marks : 10/10*
